# Chapter 1

## mm\_radf

### 1.1 Introduction

#### About this program:

- Program that calculates radial distribution function (RDF) or radial-angles distribution function

#### Developer:

- Evgeniy Alekseev aka arcanis

<esalexeev (at) gmail (dot) com>

#### License:

- GPL

### 1.2 How to use

#### Usage:

```
mm_radf -i INPUT -s FIRST, LAST -c X,Y,Z -at ... -o OUTPUT [ -r MIN, MAX ] [ -rs R_STEP ]  
[ -a MIN, MAX ] [ -as ANG_STEP ] [ -m ] [ -l LOGFILE ] [ -q ] [ -h ]
```

#### Parameters:

- |     |   |
|-----|---|
| -i  | - mask of input files   |
| -s  | - trajectory steps (integer)  |
| -c  | - cell size (float), Å  |
| -at | - atom types (integer). Format: 'ATOM1-ATOM2' or 'A1,A2,A3-B1,B2,B3'<br>(will enable RDF calculation for center mass automatically) |
| -o  | - output file name  |
| -r  | - minimal and maximal radii for analyze (float), Å. Default is '2.0,15.0'   |
| -rs | - radius step for analyze (float), Å. Default is '0.2'  |
| -a  | - minimal and maximal angles for analyze (float), deg. Default is '0.0,90.0'  |

```
-as      - angle step for analyze (float), deg. This option will enable RADF  
          calculation automaticaly  
-m       - matrix output enable  
-l       - log enable  
-q       - quiet enable  
-h       - show this help and exit
```

# Chapter 2

## Install

### 2.1 Requirements

The application mm\_radf requires the following external stuff:

- cmake  $\geq$  2.8
- gcc  $\geq$  4.8

### 2.2 How to install

#### 2.2.1 Linux

```
* mkdir build && cd build
* cmake -DCMAKE_INSTALL_PREFIX=/usr -DCMAKE_BUILD_TYPE=Release ../
* make
* make install
*
```

#### 2.2.2 Windows

```
* create project file using 'cmake'
* compile project
*
```

You may also download compiled executable file for Win\_x86.

## Chapter 3

# Changelog

V.1.0.3 (2013-08-30)

- Bug fixes

V.1.0.1 (2013-07-27)

- initial release

## Chapter 4

# File Index

### 4.1 File List

Here is a list of all files with brief descriptions:

src/ <a href="#">add_main.c</a> . . . . .	9
src/ <a href="#">coords.c</a> . . . . .	11
src/ <a href="#">main.c</a> . . . . .	13
src/ <a href="#">messages.c</a> . . . . .	13
src/ <a href="#">radf.c</a> . . . . .	14
src/ <a href="#">radf_proc.c</a> . . . . .	16

# Chapter 5

## File Documentation

### 5.1 src/add\_main.c File Reference

```
#include <stdio.h>
#include "messages.h"
```

#### Functions

- int [error\\_checking](#) (const float \*cell, const int from, const char \*input, const int num\_needed\_at, const int \*needed\_at, const char \*output, const int to)  
*function that checks errors in input variables*
- int [print\\_message](#) (const int quiet, FILE \*std\_output, const int log, FILE \*f\_log, const int mode, const char \*str)  
*function that prints message in log and stdout*
- int [printing\\_head](#) (const char \*output, const int log, const int quiet, const int matrix, const char \*input, const int from, const int to, const float \*cell, const int mode, const double r\_min, const double r\_max, const double r\_step, const double ang\_min, const double ang\_max, const double ang\_step, const int \*needed\_at)  
*function that prints header in output file*
- int [set\\_defaults](#) (float \*ang\_max, float \*ang\_min, float \*ang\_step, float \*cell, int \*from, char \*input, int \*log, int \*matrix, float \*r\_max, float \*r\_min, float \*r\_step, char \*output, int \*to, int \*quiet)  
*function that sets default values of variables*

#### 5.1.1 Function Documentation

5.1.1.1 int [error\\_checking](#) ( const float \* *cell*, const int *from*, const char \* *input*, const int *num\_needed\_at*, const int \* *needed\_at*, const char \* *output*, const int *to* )

function that checks errors in input variables

```
* error\_checking (cell, from, input, num_needed_at, needed_at, output, to);
*
```

#### Parameters

<i>cell</i>	massive of cell size
-------------	----------------------

<i>from</i>	first trajectory step
<i>input</i>	input file name
<i>num_needed_at</i>	number of needed atom types
<i>needed_at</i>	massive of number of needed atom types
<i>output</i>	output file name
<i>to</i>	last trajectory step

#### Returns

11 - error in 'cell'  
 12 - error in 'input'  
 13 - error in 'output'  
 14 - error in 'from' or 'to'  
 15 - error in 'num\_needed\_at'  
 16 - error in 'needed\_at'  
 0 - exit without errors

5.1.1.2 `int print_message ( const int quiet, FILE * std_output, const int log, FILE * f_log, const int mode, const char * str )`

function that prints message in log and stdout

```
* print_message (quiet, stdout, log, f_log, 0, str);
*
```

#### Parameters

<i>quiet</i>	status of quiet-mode
<i>std_output</i>	stdout
<i>log</i>	status of log-mode
<i>f_log</i>	log file
<i>mode</i>	number of message in "messages.c"
<i>str</i>	additional text in message

#### Returns

0 - exit without errors

5.1.1.3 `int printing_head ( const char * output, const int log, const int quiet, const int matrix, const char * input, const int from, const int to, const float * cell, const int mode, const double r_min, const double r_max, const double r_step, const double ang_min, const double ang_max, const double ang_step, const int * needed_at )`

function that prints header in output file

```
* printing_head (output, log, quiet, matrix, input, from, to, cell, mode, r_min,
*               r_max, r_step, ang_min, ang_max, ang_step, needed_at);
*
```

#### Parameters

<i>output</i>	output file nams
<i>log</i>	status of log-mode

<i>quiet</i>	status of quiet-mode
<i>matrix</i>	status of matrix-mode
<i>input</i>	mask of trajectory files
<i>from</i>	first trajectory step
<i>to</i>	last trajectory step
<i>cell</i>	massive of cell size
<i>mode</i>	0 - if RDF, 1 - if RDF for center mass, 2 - if RADF
<i>r_max</i>	maximal radius
<i>r_min</i>	minimal radius
<i>r_step</i>	radius step
<i>ang_max</i>	maximal angle for RADF
<i>ang_min</i>	minimal angle for RADF
<i>ang_step</i>	angle step for RADF
<i>needed_at</i>	massive of number of needed atom types

**Returns**

0 - exit without errors

5.1.1.4 `int set_defaults ( float * ang_max, float * ang_min, float * ang_step, float * cell, int * from, char * input, int * log, int * matrix, float * r_max, float * r_min, float * r_step, char * output, int * to, int * quiet )`

function that sets default values of variables

```
* set_defaults (&ang_max, &ang_min, &ang_step, cell, &from, input, &log, &r_max,
*               &r_min, &r_step, output, &to, &quiet);
*
```

**Parameters**

<i>ang_max</i>	maximal angle for RADF
<i>ang_min</i>	minimal angle for RADF
<i>ang_step</i>	angle step
<i>cell</i>	massive of cell size
<i>from</i>	first trajectory step
<i>input</i>	mask of trajectory files
<i>log</i>	status of log-mode
<i>matrix</i>	status of matrix-mode
<i>r_max</i>	maximal radius
<i>r_min</i>	minimal radius
<i>r_step</i>	radius step
<i>output</i>	output file name
<i>to</i>	last trajectory step
<i>quiet</i>	status of quiet-mode

**Returns**

0 - exit without errors

## 5.2 src/coords.c File Reference

```
#include <stdio.h>
#include <stdlib.h>
```

## Functions

- int [reading\\_coords](#) (const int mode, const char \*filename, const int type\_inter, const int \*label\_atom, const float \*cell, int \*num\_mol, int \*num\_atoms, int \*true\_label\_mol, int \*label\_mol, int \*type\_atoms, float \*coords, char \*ch\_type\_atoms)

*function that reads coordinates from special file format*

### 5.2.1 Function Documentation

**5.2.1.1** int [reading\\_coords](#) ( const int *mode*, const char \* *filename*, const int *type\_inter*, const int \* *label\_atom*, const float \* *cell*, int \* *num\_mol*, int \* *num\_atoms*, int \* *true\_label\_mol*, int \* *label\_mol*, int \* *type\_atoms*, float \* *coords*, char \* *ch\_type\_atoms* )

function that reads coordinates from special file format

```
* reading\_coords (0, filename, type_inter, label_atom, cell, &num_mol, &num_atoms,
*                 true_label_mol, label_mol, type_atoms, coords, ch_type_atoms);
*
```

#### Parameters

<i>mode</i>	mode of reading; '1' is statgen, '2' is enviro or frad, '3' is agl
<i>filename</i>	input file name
<i>type_inter</i>	number of needed atoms (number of needed molecules)
<i>label_atom</i>	massive of needed atom types (massive of needed molecules)
<i>cell</i>	massive of cell size
<i>num_mol</i>	number of molecules
<i>num_atoms</i>	number of atoms
<i>true_label_mol</i>	massive of true numbers of molecule for atoms
<i>label_mol</i>	massive of numbers of molecule for atoms
<i>type_atoms</i>	massive of atom types
<i>coords</i>	massive of coordinates
<i>ch_type_atoms</i>	massive of char atom types

#### Returns

- 1 - file \$filename does not exist
- 2 - unknown mode
- 0 - exit without errors

#### Work blocks

reading file

translation

free memory

## 5.3 src/main.c File Reference

```
#include <math.h>
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "add_main.h"
#include "coords.h"
#include "messages.h"
#include "radf.h"
#include "radf_proc.h"
```

### Functions

- int `main` (int argc, char \*argv[])

#### 5.3.1 Function Documentation

5.3.1.1 int main ( int *argc*, char \* *argv*[] )

##### Returns

- 1 - error in error\_checking
- 2 - input file does not exist
- 3 - memory error
- 4 - unknown flag
- 0 - exit without errors

## 5.4 src/messages.c File Reference

```
#include <stdio.h>
#include <time.h>
```

### Functions

- int `message` (const int log, const int mode, const char \*text, FILE \*output)

*function that prints messages to output*

#### 5.4.1 Function Documentation

5.4.1.1 int message ( const int *log*, const int *mode*, const char \* *text*, FILE \* *output* )

function that prints messages to output

```
* message (log, mode, text, output);
*
```

## Parameters

<i>log</i>	equal to 1 if print to logfile
<i>mode</i>	number of message
<i>text</i>	additional text
<i>output</i>	output file (may be stdout)

## Returns

- 1 - unknown mode
- 0 - exit without errors

## 5.5 src/radf.c File Reference

```
#include <math.h>
```

## Macros

- `#define M_PI 3.14159265358979323846`

## Functions

- `int search_rdf (const int num_atoms, const int *type_atoms, const int *label_mol, const float *coords, const double r_min, const double r_max, const double r_step, int *radf)`  
*function that searches molecule for rdf massive*
- `int search_rdf_cent (const int num_atoms, const int *type_atoms, const int *label_mol, const float *coords, const double r_min, const double r_max, const double r_step, int *radf)`  
*function that searches molecule for rdf massive by centered coordinates*
- `int search_radf (const int num_atoms, const int *type_atoms, const int *label_mol, const float *coords, const double r_min, const double r_max, const double r_step, const double ang_min, const double ang_max, const double ang_step, int *radf)`  
*function that searches molecule for radf massive*

### 5.5.1 Macro Definition Documentation

#### 5.5.1.1 `#define M_PI 3.14159265358979323846`

### 5.5.2 Function Documentation

#### 5.5.2.1 `int search_radf ( const int num_atoms, const int * type_atoms, const int * label_mol, const float * coords, const double r_min, const double r_max, const double r_step, const double ang_min, const double ang_max, const double ang_step, int * radf )`

function that searches molecule for radf massive

```
* search_radf (num_atoms, type_atoms, label_mol, coords, r_min, r_max, r_step,
*              ang_min, ang_max, ang_step, radf);
*
```

## Parameters

<i>num_atoms</i>	number of atoms
<i>type_atoms</i>	massive of atom types
<i>label_mol</i>	massive of numbers of molecule for atoms
<i>coords</i>	massive of coordinates
<i>r_min</i>	minimal radius
<i>r_max</i>	maximal radius
<i>r_step</i>	radius step
<i>ang_min</i>	minimal angle
<i>ang_max</i>	maximal angle
<i>ang_step</i>	angle step
<i>radf</i>	not normed RADF

## Returns

- 0 - exit without errors
- 1 - error in set center (missing atoms)

**5.5.2.2** `int search_rdf ( const int num_atoms, const int * type_atoms, const int * label_mol, const float * coords, const double r_min, const double r_max, const double r_step, int * radf )`

function that searches molecule for rdf massive

```
* search_rdf (num_atoms, type_atoms, label_mol, coords, r_min, r_max, r_step, radf);  
*
```

## Parameters

<i>num_atoms</i>	number of atoms
<i>type_atoms</i>	massive of atom types
<i>label_mol</i>	massive of numbers of molecule for atoms
<i>coords</i>	massive of coordinates
<i>r_min</i>	minimal radius
<i>r_max</i>	maximal radius
<i>r_step</i>	radius step
<i>radf</i>	not normed RDF

## Returns

- 0 - exit without errors

**5.5.2.3** `int search_rdf_cent ( const int num_atoms, const int * type_atoms, const int * label_mol, const float * coords, const double r_min, const double r_max, const double r_step, int * radf )`

function that searches molecule for rdf massive by centered coordinates

```
* search_rdf_cent (num_atoms, type_atoms, label_mol, coords, r_min, r_max, r_step,  
*                  radf);  
*
```

## Parameters

<i>num_atoms</i>	number of atoms
<i>type_atoms</i>	massive of atom types
<i>label_mol</i>	massive of numbers of molecule for atoms
<i>coords</i>	massive of coordinates
<i>r_min</i>	minimal radius
<i>r_max</i>	maximal radius
<i>r_step</i>	radius step
<i>radf</i>	not normed RDF

#### Returns

- 0 - exit without errors
- 1 - error in set center (missing atoms)

## 5.6 src/radf\_proc.c File Reference

```
#include <math.h>
#include <stdio.h>
```

#### Macros

- `#define M_PI 3.14159265358979323846`

#### Functions

- `int print_result (const char *output, const int matrix, const int mode, const int step, const int num_atoms, const double r_min, const double r_max, const double r_step, const double ang_min, const double ang_max, const double ang_step, const float *cell, const int *radf)`  
*function that print result to output file*

### 5.6.1 Macro Definition Documentation

#### 5.6.1.1 #define M\_PI 3.14159265358979323846

### 5.6.2 Function Documentation

#### 5.6.2.1 int print\_result ( const char \* output, const int matrix, const int mode, const int step, const int num\_atoms, const double r\_min, const double r\_max, const double r\_step, const double ang\_min, const double ang\_max, const double ang\_step, const float \* cell, const int \* radf )

function that print result to output file

```
* print_result (output, matrix, mode, step, num_atoms, r_min, r_max, r_step, ang_min,
*               ang_max, ang_step, cell, radf);
*
```

#### Parameters

<i>output</i>	output file name
---------------	------------------

<i>matrix</i>	status of matrix-mode
<i>mode</i>	1 - if RDF, 2 - if RDF for center mass, 3 - if RADF
<i>step</i>	\$(to - from + 1)
<i>num_atoms</i>	number of atoms
<i>r_min</i>	minimal radius
<i>r_max</i>	maximal radius
<i>r_step</i>	radius step
<i>ang_min</i>	minimal angle
<i>ang_max</i>	maximal angle
<i>ang_step</i>	angle step
<i>cell</i>	cell size
<i>radf</i>	not normed RADF

#### Returns

0 - exit without errors
